

Block Library Cutting Guide

100MM

from these vectors
you could cnc 18mm ply, ideally with 3mm bit to
a depth of 5mm, you can also print these and
transfer to linoleum mounted on wooden blocks.

this is how I would set up a file
for Lazer cutting

these are vectors similar to those
used to 3d print the image blocks
used in the rebellion, the printer was
limited to 200mm, if was you I would
make the butterfly bigger. with these
vectors you could lazer cut ply or rubber
to make image blocks, or cut by hand
for the best results.
