The Importance of Water and the Threats

Water is the lifeblood of our planet. It sustains every form of life, from the tiniest to the largest lifeforms, including humans.

We rely on water for drinking, growing food, producing energy, and maintaining nature. Without clean water, life as we know it would end.

Yet, human actions are still putting Earth's water at risk from chemicals, plastics and waste which is poisoning rivers, oceans. Our overuse and mismanagement of water are draining nature's water stores and drying up rivers.

Our behaviour is disrupting rainfall patterns, causing drought in some areas and floods in others. These actions are not only harming wildlife and ecosystems but also threatening human survival.

TACKLING THE WATER CRISIS

A Call for Change

The water crisis is a complex problem that requires urgent action. However, the existing political set-up has failed to address it effectively. Short-term thinking, lack of cooperation, and the influence of powerful industries, block progress.

To tackle this crisis, we need a new approach. Let's harness the wisdom of the crowd in a Citizens' Assembly, where a diverse group of people gets together to learn about the issues, discuss solutions and make recommendations.

Unlike traditional politics, these assemblies focus on informed, respectful conversations and long-term thinking. By giving ordinary people a voice, we can create fair and sustainable solutions to protect water for future generations.

Join the movement. Build pressure. Together, we can restore water and planet.

SUN SEA & SEW

Raw Sewage: Some Facts

In 2022, raw sewage was dumped into our waterways for a combined 1.75 million hours. An average of 825 times per day. Plus the sewer overflows that are not even monitored. This is not a crisis; it's a scandal.

Over an eleven-year period, UK water companies have paid out £16.8 billion in dividends to shareholders. Whilst some water companies do identify the position of sewer overflows along rivers and coastlines, little mention is made of what is actually being discharged. Raw sewage contains bacteria, antibiotics, pathogens, viruses and a whole host of other nasty stuff.

The recreational use of waterways by families, anglers, rowers, paddle-boarders, swimmers, dog-walkers and boaters means that a major public health threat is growing as a result of these raw sewage dumps. During times of poor water quality, entering the water can make you ill with eye, ear, skin, throat infections, gastro-enteritis, E.coli, hepatitis & more.

For more information on where and when raw sewage dumps have taken place, check the Outdoor Swimming Society and Surfers Against Sewage websites. You can also download the Safer Seas and Rivers Service app to check sewage dumping in real time (note: not all sewer overflows are monitored). The Rivers Trust Sewage Map is also useful.

If raw sewage has recently been dumped - do not go into the water & do not let your pets go into the water.

POLLUTION HAZARD

**AVOID DIRECT CONTACT WITH THE WATER AND
THINK BEFORE LETTING YOUR DOG SWIM OR DRINK**

In 2022 Severn Trent Water spilt sewage more than 44 thousand times for a total of 249,116 hours.

And yet they continue to profit from this business model and pay dividends and bonuses to shareholders and executives.

At the same time....

- Only 14% of rivers in England are considered to be at Good Ecological Status.
- Superbugs - multiple antibiotic resistant bacteria - are breeding below the Finham treatment works.
- The government has put off the deadline to clean up all rivers to 2063. Previously it was 2027.
- Thousands of dead fish went belly up in the Avon near Barford recently.
- Severn Trent owes every household £50 for treatment services they didn't deliver.
- In 2022 Sewage spilled into the River Devon 31 times for a total of 38.59 hours.

OUR DEMANDS

Clean Rivers Now!

Expand holding capacity at the treatment works so no overflows occur in extreme weather - just like the London Super Sewer.

Fix all leaks.

Kill the bugs: treat effluent with UV or oxygen.

THIS RIVER CONTAINS RAW SEWAGE

Public Warning Flyer

[Download a hi-res version of this flyer for printing.](#)

PUBLIC HEALTH WARNING: SEWAGE

WARNING: Do not enter the water or allow pets to enter the water if there has been a sewage dump in the area.

Avoid sewage outlets. Avoid algae. Cover cuts & grazes. Wear wetsuit plugs. Remove contact lenses.

Shower immediately. Wash hands. Remove wet sand. Dry Out ears. Clean cuts & grazes. Wash wetsuits & swimwear.

If unwell with diarrhoea or any other symptoms, seek medical help and let them know you have been open water swimming.

Do not swim again until you have been free of diarrhoeal symptoms for at least 48 hours or for a longer if advised by a doctor.

Wash & dry pets thoroughly after they have been in the water. Dry out insides of ears with cotton balls.

RAW SEWAGE: SOME FACTS

In 2022, raw sewage was dumped into our waterways for a combined 1.75 million hours. An average 825 times per day. Add to that the sewer overflows that are not monitored. Raw sewage contains bacteria, antibiotics, pathogens, viruses & other nasty stuff.

Over an eleven year period, UK water companies have paid out £16.8 billion in dividends to shareholders. Whilst some water companies do identify the position of sewer overflows along rivers and coastlines, little mention is given of what is actually being discharged.

The recreational use of waterways by anglers, rowers, paddle-boarders, swimmers, dog-walkers, boaters and families, means that a major public health threat is growing as a result of these raw sewage dumps. It also has a devastating effect on animal and plantlife.

During times of poor water quality, entering the water can make you ill with eye, ear, skin, throat infections, gastro-enteritis, E.coli, hepatitis & more. If you suffer skin rashes, eye irritation, vomiting, diarrhoea, fever or cold like symptoms and muscle and joint pain, go to your doctor.

For information on where sewage dumps have taken place, check the Outdoor Swimming Society and Surfers Against Sewage websites. Download the Safer Seas and Rivers Service app to check sewage dumping in real time. The Rivers Trust Sewage Map is also useful.
