

Links to pages outside of the RT

A sensible distinction between internal (links to other parts of the RT) and external links to other websites, forms, social media etc is to make the **external links open in a new tab**.

The way to do this is with a little bit of html:

```
<a href="LINK" target="_blank" rel="noopener noreferrer">TEXT</a>
```

just copy that on the page you are editing and add your URL where it says **LINK** and the words you want to appear as the hyperlink itself where it says **TEXT**
