

Links within RT

You can use markdown to create links within the Rebel Toolkit using a combination of square and curved brackets e.g.

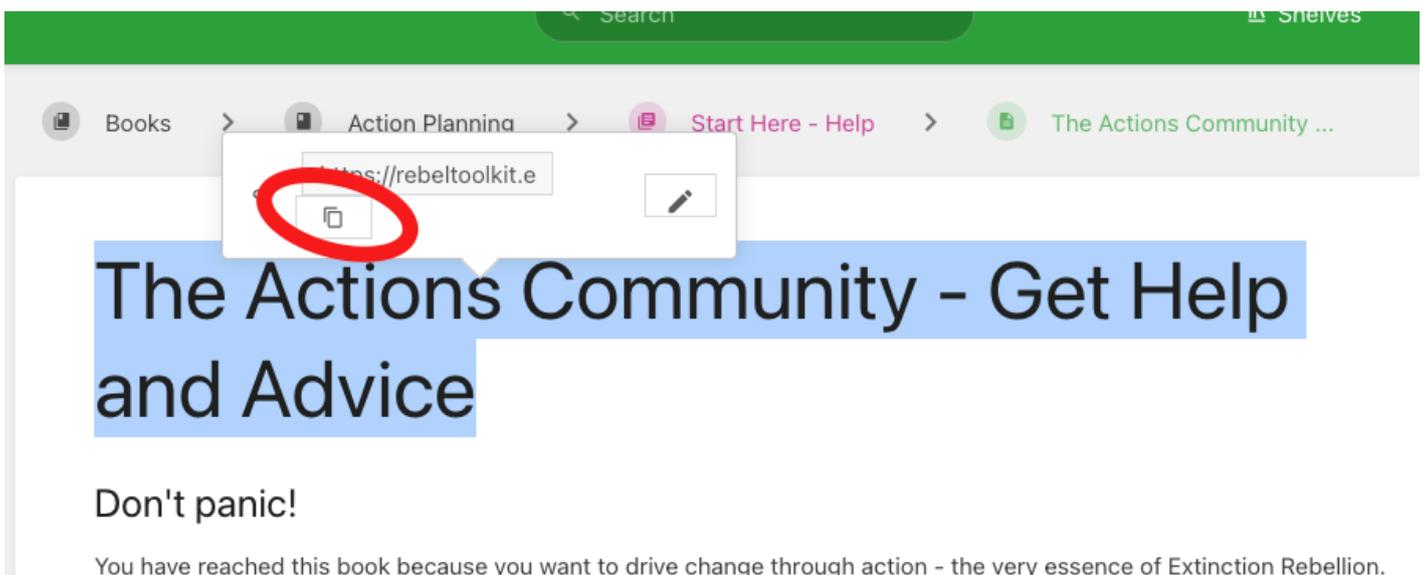

```
[View the Media and Messaging shelf](https://rebeltoolkit.extinctionrebellion.uk/shelves/07-media-and-messaging)
```

which will then look like this...

[Click here for view the Media and Messaging shelf](#)

The URL (web address) of a shelf, book or chapter in the Rebel Toolkit is based on it's title.

The same applies for pages, BUT this can cause problems if you make a link to a page and then the page gets renamed or moved to another book. But for pages (and even any part of a page) you can actually pick up a link that won't change even if the page title does or even if this whole page is moved elsewhere.

The screenshot shows a browser window with a green header and a navigation bar. The main content area has a blue background with the text 'The Actions Community - Get Help and Advice'. Below this, there is a section titled 'Don't panic!' with a sub-heading 'You have reached this book because you want to drive change through action - the very essence of Extinction Rebellion.' A red circle highlights a pop-up box that appears over the text, containing the URL 'https://rebeltoolkit.e' and a copy icon.

- Go to the page you want to make a link to
- Highlight a piece of text by double clicking on a word. The word gets highlighted.
- A pop-up box appears - in that pop-up box you will see the unique address of the page or paragraph.

For example the address of this page is `https://rebeltoolkit.extinctionrebellion.uk/link/463`. So you can make a link like this: [Links to pages in Rebel Toolkit](#) which will continue to work even if the page is moved.
