

STOP THE FLOODS

Extreme floods are hitting more communities.

Homes are destroyed, crops ruined, food prices and insurance bills soar. Food prices climb when farmland is under water.

Fossil fuel pollution is heating up the planet and driving these storms.

We can still change course. Experts are clear: no new coal, oil or gas projects.

Local groups across the UK are organising within their communities to protect homes and livelihoods. Join with others in your area to demand a safe future.

Together, we can hold back the flood.
