

SOS Facilities on the Hub

This section describes how the Hub helps to implement the principles of [Self-Organising Systems](#) within XR UK. We'll show how the External Coordinator Role in a group, or circle, can be linked to a Representative Role in the parent group, or supercircle. We'll also show how Mandates for Working Groups need agreement with their supercircle.

Hub Groups and SOS

Our [Organism diagram](#) shows all the groups/circles on the Hub, and how they fit together within our self-organising structure.

The Hub is used by lots of different kinds of groups/circles, and some have decision-making power, so our **Constitution** says these should each have a [Mandate](#). The **Mandate** details the group's **Purpose** (the result the group is trying to bring about), **Accountabilities** (what the group's jobs are) and **Domains** (resources that the group controls).

The decision whether to follow the Constitution rests with the groups at the outermost level of the Organism – the UK Rebel Hive (for UK Working Groups), the Regions and Nations, XR Youth, etc. Together with the Hive, many of the Regions and Nations have decided to adopt the Constitution. XR SOS will inform the Hub which groups have made this decision – you can see whether your group has adopted the Constitution by looking at your group on the Hub. Groups who have adopted the constitution are shown in a green colour, and ones which have not in a pink colour. To make it even clearer, we use different names for things if a group has not adopted the constitution:

If the group follows the constitution	If it doesn't
Mandate	Scope
Role	Position
Purpose	What this group is for
Accountability	Activity
Domain	Resource

Once a group has adopted the Constitution, then new Working Groups and Roles under that group **must** decide on and publish, via the Organism, a Mandate which contains a Purpose, as a minimum, but ideally Accountabilities too. This applies at all levels – thus every UK Working Group must have a Mandate, no matter how deeply nested it is within the structure. For Regions/Nations, this applies only to Regional Working Groups and District Working Groups. It isn't enforced to Local

Groups (or their working groups) because most Local Groups are not large enough to need to use the full version of our SOS – but they can still have a Mandate if they want to.

Linked Roles

Within XR, it is often necessary for a group/circle to be represented in another circle. The classic example of this is the External Coordinator in a circle who will normally be linked to a Representative Role in the parent/supercircle. In this case, the Linked Role represents the subcircle in the supercircle and, in addition, the supercircle holds the subcircle's Mandate.

Linked Roles can also be used between any 2 circles in the Hub, such as:

- Some Regions & Nations have an Anchor circle or Local Group Coordinator's circle. They can link the External Coordinator role in each of their Local Groups to a role in the Anchor Circle.
- There is often a need for cross-group collaboration – Arrestee & Legal Support (A&LS), for example, has a rep who attends Actions meetings, to appraise A&LS of forthcoming actions, and to advise the Actions circle on arrest issues.

The Hub organises these roles so that someone joining the Linked Role in one circle is automatically elected to the Linked Role in the second circle – and joined to that circle, if they are not already a member. Linked Roles appear with a yellow border in the [XR Organism](#) diagram.

Note that when someone leaves a Linked Role in one circle, they are automatically removed from the Linked Role in the other circle. The Hub also offers to remove them from membership of the other circle (this is optional).

Which Hub Groups implement SOS?

There are many different kinds of Hub Group: the Rebel Hive contains the UK Working Groups, and their sub-circles (Child Groups). Regions and Nations have their own Working Groups, together with District and Local Groups, which again can contain working groups. While all the groups/circles within the Rebel Hive are subject to SOS, only the Regions/Nations that have adopted the new Constitution are obliged to implement SOS, and that is only **above** the Local Group level.

As well as Local Groups, there are also other groups where SOS doesn't apply, because they do not make decisions on behalf of the movement, including:

- Affinity group – small groups of people supporting each other and working to achieve XR's goals. These groups are most often used for organising actions. By organising as many small groups pursuing a shared vision, we avoid getting too bogged down in slow decision-making processes

- Community group – a group for rebels to connect and work together through communities of shared self-identity rather than of shared location (for example, faith, profession, ethnicity and sexual identity)
- Role support group – groups that provide help and mutual support to people in a certain role in other groups
- Connected group – a permanent ongoing group that does not have a mandate. Connected groups are autonomous and operate independently outside of Hive circles. They may have a Linked Role to a UK circle but are not allowed decision-making power in that circle. Decision-making power requires accountability. In order to be accountable, you need a mandate that the parent circle has consented to
- Project group – a group with no decision-making capability, which therefore is not required to have a mandate. Any decisions have to be made by another group that has the mandate to make them
- Local groups and below in Nations and Regions

Hub Groups where SOS is enforced

Before editing any Hub Group, make sure to check the constitutional status at the bottom of their Contact Info. This tells you whether the group has to follow the Constitution, and why. Thus, creating a new New Child Group for an constitutional group will require a Mandate to be entered before the Child Group can be created, unless it is one of the groups included in the list above (e.g. a Project Group).

Adding Linked Roles

See [Linking a Role to Another Group](#)

Default Roles are created by SOS

A set of important **Default Roles** has been created by SOS. These include External Coordinator, Internal Coordinator, Group Admin, etc. Hub Admins can edit these Default Roles, but they should only be changed with the permission of SOS. Click the Default Roles option on any Groups page (it may be in the ... continuation menu) to see the following listing:

Please do not add or edit Default Roles without first agreeing the changes with SOS

[Previous](#)[1](#)[Next](#)

Group Admins selecting a new role can choose from these Default Roles to get a role prefilled with a standard purpose and accountabilities.

If the tick-box under **Standard** is ticked, then any new Child Group being created will get each one of these Standard Roles automatically.
